Data Science

Dedicated and enthusiastic data science professional with a strong foundation in data analysis, machine learning and statistical modeling. Proficient in data manipulation, Data Visualization, and Predictive Analytic s, with hands-on experience in both academic and real-world projects. Gained hands-on experience by developing a full-stack project using Next.js, integrating AI and Data Science techniques to deliver intelligent and data driven functionality.

Experience

Project: UMT HR and Faculty Management System

Description :

A web-based portal designed for UMT HR , Faculty, and Admin to manage faculty records, handle HR operations and Faculty Operations.

Role:

Developed the **frontend interface** using Next.js with TypeScript, implemented interactive and responsive UI components, and handled **backend routing logic** for smooth communication between frontend and database.

Technologies:

Next.js, TypeScript, Supabase (Database), Neon Postgress, ORM's

---

Software Engineer at Coding Caliber

Duration: 3 Months

- Developed and deployed AI chatbot solutions using **Python**, improving automated response handling and workflow efficiency.
- Built automation pipelines using **n8n**, reducing manual task processing and increasing operational productivity.
- Integrated **REST APIs**, backend logic, and third-party services for seamless system communication.
- Designed end-to-end automation systems including triggers, processing logic, and execution flows.
- Performed debugging, testing, and performance optimization of automation scripts to ensure reliability and scalability.
- Collaborated with development teams to implement real-world automation solutions aligned with project requirements.

Key Skills: Python, n8n, API Integration, Automation Development, Chatbot Development, Backend Logic, Workflow Automation, Debugging, Testing, Fast API, Nextjs(TypeScript), Docker, RAG

Skills

Programming Languages: Python, Next.js Framework, Typescripts, JavaScript, React, Flask Framework, FastAPI
Libararies & Framework: Machine Learning,Scikit-learn, XGBoost, Deep Learning, TensorFlow, Keras
Data Analysis: Pandas, Numpy
DataBase: Microsoft SQL Server, MoongoDB, Postgress(Supabase, NeonDB), SQLlite
Data Visualization: Matplotlib, Seaborn
Tools: Jupiter Notebook, Google Collaborator, Cisco Packet Tracer, Strapi Headless CMS(Content Management System), Open CV, apify, playwright, patchright, crawlee, N8N, Docker, RAG
Version Control: Git version Control

Projects

WhatsApp Business Chatbot – Final Year Project (In Progress)

Developing an AI-powered WhatsApp chatbot to automate customer support and business workflows for small businesses.

- Built backend in Python for message processing and intent handling
- Integrated WhatsApp Business API for real-time interactions
- Designed automated responses for FAQs and product queries
- Implemented webhooks and session management for multi-user chats
- Focused on scalable architecture for multi-business support

Fashion Connect Full-Stack Web Application

Built a dynamic fashion platform using **Next.js** and **Strapi CMS**, enabling designers to showcase collections and users to browse with a clean, scalable UI.

- Developed responsive frontend with **Next.js** and reusable UI components.
- Integrated **Strapi RESTful APIs** for collections, categories, and profiles.
- Implemented **secure authentication** and **state management** with Zustand.

Instagram Insights Scraper – Data Extraction Tool

Built a full-stack scraping system to collect Instagram posts, reels, profiles, and engagement data for analytics.

- Developed automated scrapers using Python, FastAPI, and Apify Crawlee
- Extracted captions, media metadata, and engagement metrics

- Implemented logic to identify similar and trending profiles
- Built REST APIs for data access and dashboard integration
- Optimized performance with async processing, retries, and rate-limit handling

---

Crypto Price Prediction ML System

Developed a machine learning system to forecast cryptocurrency prices using real-time API data and multiple predictive models.

Implemented models: Random Forest, Linear Regression, ANN, LSTM, Gradient Boosting

- Performed data preprocessing, feature engineering, and normalization
- Evaluated models using MAE, RMSE, and R^2 metrics
- Applied hyperparameter tuning and cross-validation for accuracy
- Automated real-time data pipeline for continuous prediction updates

---

Library Management System Python & SQL

Collaborated in a 4-member team to create a library system handling book records, profiles, and transactions.

- Implemented features: **borrow/return tracking, fines, search, and reporting**.
- Built modular OOP, based code structure in **Python**
- Designed and managed relational data with **Microsoft SQL Server**.

Hand Gesture Recognition Computer Vision

Created an intelligent real-time gesture recognition system using **OpenCV, MediaPipe, and CNNs**.

- Tracked hand landmarks with **MediaPipe** and webcam input.
- Classified gestures (thumbs up, open palm, fist) with **CNN model**.
- Mapped gestures to system commands.

Education

Superior University: BS Data Science in Undergraduate **(8 Semester)**

Punjab Group of College: ICS in Physics
