Tabish Niaz

Lahore, Punjab | (+92) 3095563262 | tabishniaz6247@gmail.com |

PROFILE

Motivated and detail-oriented professional with expertise in Mobile Application Development, Java Spring Boot, React, Django, DevOps, and Cyber Security. Skilled in building scalable applications, managing deployment workflows, and eager to contribute to innovative projects with real-world impact.

EDUCATION

BS Information Technology | University of Lahore — CGPA: 3.35 | Oct 2022 – May 2026
Intermediate | Govt Shalimar College Baghbanpura Lahore — 77.27%| Sept 2020 – Sept 2022
Matriculation | Latif Education High School Lahore — 81.90%| Mar 2018 - Aug 2020

SKILLS

TECHNICAL SKILLS

- **Developer Tools:** Git, GitHub, VS Code, IntelliJ
- **DevOps:** Jenkins, Docker, Kubernetes, Linux
- **Frontend:** HTML5, CSS3, JavaScript
- **Backend:** Django, Spring Boot
- **Frameworks/Libraries:** Spring(Security, Data JPA, Hibernate), Spring Boot, Flutter, React, Django Rest Frame
- **Languages:** OOP (C++), Dart, Python, Java
- **Additional:** RESTful APIs, MYSQL, Basic UI, Keycloak(OAuth2, OpenID Connect), Stripe API(Payment Gateway)

WORK EXPERIENCE

Backend Developer (Java Spring Boot) / Project Trainee
E-Commerce Backend System | Remote | Oct2025 – Jan 2026

- Developed a scalable E-Commerce backend system using Java Spring Boot following RESTful architecture principles.
- Integrated Keycloak for centralized authentication and identity management using OAuth2 & OpenID Connect.
- Configured Spring Boot as a Resource Server to validate JWT tokens issued by Keycloak.
- Implemented role-based access control (Admin/User) using Keycloak client roles.
- Designed APIs for product management, cart handling, and order processing.
- Integrated Stripe Payment Gateway for secure online payment processing.
- Implemented payment intent creation and order confirmation after successful Stripe transactions.
- Used Spring Data JPA & Hibernate for database operations with MySQL.
- Applied layered architecture (Controller → Service → Repository).
- Implemented global exception handling and input validation.
- Tested secured APIs using Postman with Bearer token authentication.

DevOps Intern / Project Trainee
Netflix Clone CI/CD with Monitoring | Remote | July 2025 – Aug 2025

- Implemented a comprehensive CI/CD pipeline for a Netflix clone application using Jenkins, Docker, and Kubernetes for automation and orchestration.
- Integrated security tools like Trivy and OWASP Dependency Check for container and code vulnerability scanning.

- Deployed monitoring stack with Prometheus and Grafana for real-time application performance tracking and alerting.
- Configured Jenkins to send email notifications and integrated SonarQube for continuous code quality analysis.
- Managed Kubernetes cluster setup on AWS EC2 Ubuntu instances, including master-slave node configuration.
- Ensured deployment automation, scalability, and security in alignment with DevSecOps best practices.

Full-Stack Developer Intern / Project Trainee
Flutter + Django E-Commerce App | Remote | Jan 2025 – May 2025

- Developed a cross-platform e-commerce mobile application using Flutter for frontend and Django REST Framework for backend.
- Implemented secure user authentication and authorization with JWT.
- Designed product catalog, search, filter, cart, Wishlist, and order history modules for smooth shopping experience.
- Integrated PostgreSQL database for reliable and scalable data management.
- Added payment gateway (Stripe/PayPal) integration for secure online transactions.
- Ensured clean UI/UX design with responsive layouts and reusable Flutter components.
- Conducted testing and debugging to improve reliability and performance.

DevOps Intern / Project Trainee
Self-Driven Project | Remote | May 2025 – Jun 2025

- Implemented a CI/CD pipeline for a web application using Jenkins for automation, Docker for containerization, and Kubernetes for orchestration to ensure smooth deployment across environments.
- Created Jenkins pipelines to automate build, test, and deployment stages triggered by code commits.
- Containerized frontend and backend services using Docker and deployed them into a Kubernetes cluster with efficient resource management.
- Configured Kubernetes objects such as Pods, Deployments, Services, and Ingress Controllers to manage application scalability and traffic routing.
- Set up Helm charts for version-controlled and repeatable deployments.
- Ensured high availability and scalability of the web application through Kubernetes clustering and rolling updates.

Projects

Project Title: Secure E-Commerce Backend System with Spring Boot, Keycloak & Stripe

Summary:

Developed a production-ready and secure E-Commerce backend using Java Spring Boot with centralized authentication via Keycloak and online payment integration using Stripe. The system supports secure login, role-based authorization, product management, cart functionality, and real-time payment processing.

Key Contributions:

- Integrated Keycloak as Identity and Access Management (IAM) solution.
- Configured OAuth2 Resource Server in Spring Boot for JWT validation.
- Implemented role-based authorization using Keycloak client roles.
- Designed REST APIs for Products, Categories, Cart, and Orders.
- Integrated Stripe API to handle secure payment processing.
- Implemented payment confirmation workflow before order finalization.
- Designed relational database schema with proper entity relationships.
- Applied exception handling and validation mechanisms.
- Structured backend using layered architecture for maintainability.

Technologies & Tools Used:

- **Language:** Java
- **Framework:** Spring Boot
- **Security & IAM:** Keycloak (OAuth2, OpenID Connect)
- **Authentication: JWT (via Keycloak)**
- **ORM:** Spring Data JPA, Hibernate
- **Database:** MySQL
- **Payment Gateway:** Stripe API
- **API Testing:** Postman
- **Build Tool: Maven**
- **Version Control:** Git & GitHub

Outcomes & Achievements:

- Built enterprise-level secure backend using external IAM (Keycloak).
- Implemented real-time payment processing using Stripe.
- Gained hands-on experience with OAuth2, JWT, and role-based authorization.
- Developed scalable and maintainable backend architecture.
- Strengthened expertise in secure API development and payment integration.

Skills Demonstrated:

- Secure Backend Development
- Identity & Access Management (Keycloak)
- OAuth2 & OpenID Connect
- Payment Gateway Integration (Stripe)
- REST API Architecture
- Role-Based Access Control

- Database Design & ORM
- Clean Architecture & Exception Handling

Project Title: Automated CI/CD Pipeline and Monitoring for Netflix Clone Using Jenkins, Docker & Kubernetes

Summary:

Built and deployed a Netflix-clone app with a secure CI/CD pipeline, containerized using Docker, orchestrated on Kubernetes, and monitored with Prometheus & Grafana. Integrated security tools for a complete DevSecOps solution.

Key Contributions:

- Implemented Jenkins-based CI/CD pipeline.
- Containerized app with Docker and deployed on Kubernetes.
- Integrated security tools (Trivy, OWASP Dependency Check).
- Added SonarQube for code quality checks.
- Configured Prometheus and Grafana for monitoring.
- Managed AWS EC2 deployments.
- Configured scalable Kubernetes clusters for high availability. Integrated TMDB API to fetch movie data for the app.

Technologies & Tools Used:

- **CI/CD:** Jenkins
- **Containerization:** Docker
- **Orchestration:** Kubernetes
- **Security:** Trivy, OWASP Dependency Check
- **Code Quality:** SonarQube
- **Monitoring:** Prometheus, Grafana
- **Cloud:** AWS EC2 (Ubuntu 20.04 & 22.04)
- **Scripting & Automation:** Bash, Jenkins file (Declarative Pipeline)
- **API:** TMDB API

Outcomes & Achievements:

Implemented a fully automated, secure CI/CD pipeline, reducing deployment time and manual effort significantly.
Enhanced application security by integrating container and dependency vulnerability scanning tools.
Achieved real-time application health monitoring and alerting, enabling quick response to potential issues.
Successfully demonstrated end-to-end DevSecOps implementation in a scalable Netflix-inspired environment.

Skills Demonstrated:

- DevOps & DevSecOps Implementation
- CI/CD Pipeline Automation
- Containerization & Orchestration
- Application Security Integration
- Real-Time Monitoring & Altering
- AWS EC2 Cloud Management
- Infrastructure as Code (using Kubernetes)
- Jenkins Pipeline Scripting
- Team Collaboration & Project Documentation

Project Title: E-Commerce App with Flutter and Django (Full-Stack)

Summary:

Developed a cross-platform E-Commerce mobile application using Flutter for the frontend and Django REST Framework for the backend. The app enables product browsing, cart management, secure checkout, and user authentication, with a scalable backend and a responsive mobile UI.

Key Contributions:

- Designed and developed a Flutter mobile app with modern UI/UX and responsive design.
- Built a Django REST API for product management, orders, payments, and authentication.
- Implemented secure user authentication and authorization with JWT.
- Integrated PostgreSQL database for reliable data storage.
- Developed features like product search, filtering, and categories.
- Implemented shopping cart and order management with real-time updates.
- Integrated payment gateway (e.g., Stripe/PayPal) for secure transactions.
- Added Wishlist and order history functionality for enhanced user experience.

Technologies & Tools Used:

- **Frontend (Mobile):** Flutter (Dart)
- **Backend:** Django, Django REST Framework (DRF)
- **Authentication:** JWT (JSON Web Tokens)
- **Payment Gateway:** Stripe / PayPal (any one you used or plan to mention)
- **Version Control:** Git & GitHub

Outcomes & Achievements:

- Built a scalable full-stack mobile app combining Flutter and Django.
- Delivered an intuitive shopping experience with secure payment and order management.
- Strengthened expertise in cross-platform mobile development with backend integration.

Skills Demonstrated:

- Full-Stack Mobile Development (Flutter + Django)
- REST API Development & Integration
- Secure Authentication & Payments
- Database Design & Management
- UI/UX Design for Mobile Apps
- Problem-Solving & Debugging

Project Title: Smart Notes App with React and Django (Full-Stack)

Summary:

Developed a full-stack Notes Management application using React for the frontend and Django REST Framework for the backend. The app provides secure authentication, CRUD operations for notes, and a responsive, user-friendly interface.

Key Contributions:

- Designed and implemented a responsive React frontend with reusable UI components.
- Built a Django REST API for authentication (JWT) and CRUD operations on notes.
- Integrated PostgreSQL for persistent and scalable data storage.
- Implemented user authentication and authorization to ensure data privacy.
- Added search, sort, and filter features for efficient note management.
- Wrote unit tests for backend API endpoints to ensure reliability.

Technologies & Tools Used:

- **Frontend:** React.js (Hooks, Axios, React Router, Tailwind CSS/Bootstrap)
- **Backend:** Django, Django REST Framework (DRF)
- **Database:** PostgreSQL / SQLite (for development)
- **Authentication:** JWT (JSON Web Tokens)
- **Version Control:** Git & GitHub

Outcomes & Achievements:

- Delivered a production-ready full-stack app with seamless integration of frontend and backend.
- Improved user experience with a clean and responsive interface.
- Gained strong expertise in full-stack development with React and Django.

Skills Demonstrated:

- Full-Stack Development (React + Django)
- REST API Development & Integration
- Secure Authentication & Authorization
- Database Design & Management
- Responsive Frontend Design
- Software Testing & Debugging
