INTRODUCTION

I am a Software Engineering graduate with hands-on experience in Flutter, React, Node.js, Firebase, and Python-based AI systems. Specialize in building end-to-end applications, from intuitive user interfaces to robust backend systems, APIs, and AI model integration. I'm passionate about developing scalable, real-world solutions that address practical challenges. I am a continuous learner who actively explores new technologies to stay current with industry trends and improve my ability to deliver high-quality and practical software solutions.

EDUCATION

BS Software Engineering

COMSATS University | Lahore Campus | CGPA: 2.97 — Feb 2022 – Jan 2026

EXPERIENCE

Flutter Intern

Punjab Information Technology Board (PITB), Lahore — July 2025 - September 2025

- Developed and maintained a Flutter application using MVC architecture and state management that made my code 70% cleaner and 20% faster.
- Created responsive, user-friendly mobile interfaces optimized for every Android device using modern UI/UX standards.
- Implemented Firebase authentication and Firestore database integration so users can stay secure and store data.
- Collaborated with a professional dev team of 10+ people using industry workflow and understanding them.

SKILLS

Language: Dart, Python
Mobile: Flutter, MVC, State Management
Web: React.js, Node.js, Express, Tailwind CSS
Databases: MongoDB, Firebase
AI/ML: Computer Vision, Model Training (Colab)
Tools: GitHub, Postman, Vs Code, Android Studio
Soft skills: Problem Solving, Teamwork, Analytical Thinking

PROJECTS

KOKORO DOJO APPLICATION | Flutter, Computer Vision, Fast API | Martial Arts App — January 2025 – November 2025

Final Year Project of a martial arts app. It includes user authentication, progress tracking, training lectures, a user profile, a chatbot, and an AI model trained on multiple datasets with an accuracy of 90+ that tells the user whether they are using the right training technique. Mainly, it's a posture analysis model using Computer Vision. To solve the problem of a personal trainer at home.

BOOKS MANGEMENT SYSTEM | MERN Stack | Full Stack Development — July 2024 – July 2024

Books management system that is built in MERN Stack using the platform VS Code and the tool Postman for API verification.

TEK DARAZ SHOPPING WEBSITE | React.js, Node.js, Mongo | MERN Stack — Aug 2024 – Aug 2024

The Mobile Teach Shopping website is made to help millions of users all over Pakistan to buy anything from their comfort zone. Implemented an intuitive admin panel for the Teach Shopping website. Streamlined product uploads, order management, and tracking, saving administrators approximately 20 hours per week in manual tasks. Fully SEO optimized with slugging and AI.

CODE SMELL DETECTION | Python, Flask | Tool — November 2024 – December 2024

Code Smell Detection tool built using Python to detect the code smells in the whole project or just a file of Python code. Using Flask to render the frontend.

NUMBER PLATE DETECTION | Python, Django | Image Segmentation — November 2024 – December 2024

Programmed in Python with an accuracy of 70% to detect the car number plates. Django used to render the frontend and to save the segmented images.

AMERICAN SIGN LANGUAGE PROJECT | Python | AI C Automation — October 2024 – December 2024

ASL improved with an accuracy of 90% to detect the hand sign for people with disabilities. AI Model trained on Google Teachable Machines.
