OBJECTIVE

Electrical Engineering graduate transitioning into AI and Python development, with hands-on experience in building intelligent applications and backend solutions. Proficient in Python programming and software development fundamentals, with a strong analytical mindset and problem-solving approach. Passionate about learning, improving technical skills, and contributing to impactful technology projects.

EXPERIENCE

AI Intern | WEBEVIS TECHNOLOGIES

11-2025 – Present

Hands-on experience in Python-based backend development and automation, working with APIs and modern frameworks to build reliable applications across multiple AI domains, including Machine learning, Computer vision, and Language-based systems.

Estimation Engineer | TARIQ ELECTRIC PVT. LTD.

07-2025 – 10-2025

Working as Estimation Engineer, Responsible for estimating LV/MV switchgear, control panels, and electrical systems, reviewing technical documents, preparing BOQs and Tender Proposals, and coordinating with suppliers for accurate pricing.

PROJECTS

Computer Vision System Object Detection and Pose Estimation Using YOLO and MediaPipe

- Implemented the complete object detection and counting pipeline from data input to output visualization.
- Developed a Python-based system using YOLO to detect and count objects in video streams.
- Designed a counting mechanism for objects crossing a defined virtual line in real-time.
- Built a command-line interface for configurable input/output handling of video files.
- Optimized video frame processing for efficient detection and annotation.

Cronbot Task Scheduler and Reminder

- A Python-based task automation bot designed to schedule and execute tasks efficiently, with multi agent support via an MCP server.
- Built the complete execution pipeline for task registration, execution, and logging.
- Integrated an MCP server to allow agents to interact with and use the bot's tools.
- Developed modular, reusable code for scheduling, logging, and job management.

Edgemarket Agent Integration for Predictions

- Developed an intelligent agent using Agno to provide predictions based on real-time web search data.
- Implemented persistent memory to store and recall context from previous runs.
- Integrated a tool for the agent to fetch and process external data for informed predictions.
- Designed the system for automated, context-aware decision-making using Python.

EDUCATION

BS Electrical Engineering Technology | UNIVERSITY OF ENGINEERING AND TECHNOLOGY
2018 – 2022
CGPA 3.093

SKILLS

Programming Languages: Python
Backend Development: FastAPI
Machine Learning: Machine Learning Fundamentals, Scikit-learn, Feature Engineering, Data Preprocessing, Neural Networks, TensorFlow, Forward propagation, Backpropagation, Activation Functions.
Computer Vision: YOLO (Object detection, Pose estimation), MediaPipe.
AI Systems: Large Language Models (LLMs), Retrieval Augmented Generation (RAG), Langchain, Agentic AI Systems, Autonomous Workflows, MCP servers, Prompt Engineering.
