Hammad Iqbal

hammadigbal0510@gmail.com +92 316 0585838 Lahore, Pakistan LinkedIn

Professional Summary

Versatile developer skilled in building cross-platform applications (Swift, React Native, Flutter) and integrating foundational Artificial Intelligence concepts into mobile solutions. Successfully developed an AI-powered health advisor for iOS, utilizing Firebase Authentication and real-time API Integration. Combines strong Front-End Development skills with Python proficiency for full-stack project execution and data visualization.

Work Experience

Mobile App Developer – Akhtar Fuiou Technologies *June 2025 – Sep 2025*

- Developed a full-featured banking application (Digit++) for iOS using Swift and Xcode, achieving a 20% increase in user adoption within three months.
- Implemented Firebase Authentication for secure user sign-in and data synchronization, reducing login failures by 15% and improving data sync speed by 200 ms.
- Collaborated on UI/UX optimization, enhancing responsiveness and performance across multiple iOS devices.
- Utilized Git and SourceTree for version control, ensuring efficient code management and team collaboration.
- Assisted in debugging and testing using Xcode's Instruments and other iOS development tools.

Education

University of Lahore – Lahore, Pakistan
Bachelors of Computer Science

Punjab College – Lahore, Pakistan
Pre Engineering

Skills

Mobile App Development, Programming Fundamentals, Artificial Intelligence, JavaScript, Data Base System, Object Oriented Programming, Software Testing
Languages: Swift, JavaScript, HTML, CSS
Frameworks & Tools: React Native, Flutter, Xcode, Visual Studio, Firebase, Git, SourceTree
Core Competencies: iOS App Development, Front-End & Web Development, Cross-Platform App Development, API Integration, UI/UX Optimization, Version Control

Projects

AI- Based Health Advisor App

- Created an advanced AI-powered health advisor using Swift for iOS platforms, demonstrating expertise in AI integration and mobile development.
- Designed and integrated a tracking chatbot to provide real-time health advice and interaction.
- Implemented Firebase Authentication for secure user sessions and real-time APIs for appointment scheduling.
- Added map integration for locating nearby hospitals, enhancing accessibility and usability.

Student-Teacher-Admin Management System — Python Application

- Developed a multi-user Python application with Student, Teacher, and Admin modules, including secure login and user management.
- Enabled students to enroll/unenroll in courses, view transcripts, calculate SGPA/CGPA, and visualize CGPA using Matplotlib.
- Built teacher and admin functionalities for profile management, salary slip generation, system statistics, and automated user registration, practicing full application workflow.

Face Expression Detection System - Python & AI

- Built a Python-based application that detects facial expressions from uploaded or captured images using basic AI methods.
- Applied face detection and image preprocessing to classify expressions as Happy or Sad.
- Implemented a complete workflow from image input to emotion prediction, gaining hands-on experience in AI and image analysis.

Health Advisor App

- Developed a mobile health advisory application using React Native in Visual Studio.
- Integrated Firebase Authentication for secure login and signup functionality.
- Implemented features for doctor data management, including Star+ rating, edit, and delete options.
- Focused on improving user experience through intuitive UI and efficient data handling.
