PROFILE

Software Engineering student specializing in **full-stack web development and AI agent systems**. Experienced in building responsive web applications using **React.js, Node.js, Express.js, and PostgreSQL**. Hands-on experience designing **memory-enabled AI agents** using LangChain and CrewAI. Focused on writing clean, maintainable code and delivering user-friendly web experiences.

EDUCATION

PUCIT — University of the Punjab Feb 2023 – Present
Bachelor of Science, Software Engineering, CGPA 3.6 Lahore, Pakistan

SKILLS

Frontend: React.js, HTML5, CSS3, JavaScript (ES6+), Streamlit
Backend: Node.js, Express.js, .NET, REST APIs, Razor Pages
Databases: PostgreSQL, MongoDB, SQL Server, Dapper ORM
AI / LLM Tools: LangChain, CrewAI, mem0, Groq API
Languages: JavaScript, C++, SQL, C#
Tools & Platforms: Git, GitHub, VS Code, Postman, Jira

EXPERIENCE

AI Developer Intern — Spiral Labs Dec 2025 – Feb 2026

- Developed and experimented with AI-driven workflows using **LangChain and CrewAI**, focusing on task-based and memory-enabled agent design.
- Implemented **conversational memory and context retention** mechanisms using mem0 to improve the relevance and continuity of AI agent responses.
- Designed and refined **multi-agent pipelines** to automate structured task execution and knowledge retrieval.

PROJECTS

Memory-Based AI Agent (LangChain, mem0, Groq API, Streamlit)

- Built an **AI agent with persistent memory** using LangChain and mem0, enabling context retention across multi-step interactions.
- Integrated **Groq API for fast LLM inference** and designed a Streamlit interface for real-time agent interaction and testing.

Book Notes & Tracking Application (Node.js, Express.js, PostgreSQL)

- Developed a **full-stack web application** with user login, book management, cover image uploads, and personal reading notes.
- Built a **RESTful Node.js + Express backend** with PostgreSQL for structured, user-specific data storage and management.

Facebook-Like Social Web App (Semester Project) (.NET, Identity, Dapper, Razor Pages)

- Built a **Facebook-style social platform** with posts, profiles, and friend connections using .NET and Razor Pages for server-side rendering.
- Implemented **Identity Framework for secure authentication** and Dapper ORM for efficient, structured database access.
