GitHub:https://github.com/Farid-Bytes

TECHNICAL SKILLS

Programming

Python, PHP, JavaScript

Backend Development

FastApi, Laravel Framework

AI / Machine Learning

TensorFlow, SpeechBrain, VADER Sentiment Analysis, OpenAI APIs

Web Technologies

HTML, CSS, Bootstrap

Data Tools

NumPy, Pandas

Soft Skills

Problem Solving, Analytical Thinking, Team Collaboration, Quick Learner

AI SYSTEMS & TOOLS

Speech AI: Whisper API, SpeechBrain, pyannote.audio.

NLP & Sentiment Analysis: VADER Sentiment Analysis.

AI Integration: OpenAI APIs, LLM-based report generation.

Data Processing: NumPy, Pandas

Model Deployment: FastAPI

AI Architecture: Agentic AI Systems, AI Pipelines, Backend AI Integration

EDUCATION

BS Computer Science

Government College University Faisalabad
2022 - 2026

FSc Pre-Engineering

Fazaia Degree College, Faisal Base, Karachi
2020 - 2022

Matriculation

Fazaia Degree College, Faisal Base, Karachi
2018 - 2020

PROFILE

AI and backend developer with hands-on experience building AI-driven systems, voice analytics pipelines, and agent-based applications. Skilled in developing scalable backend APIs using FastAPI and Laravel, and integrating modern AI technologies including Whisper, SpeechBrain, pyannote.audio, and OpenAI APIs. Experienced in designing AI pipelines that transform raw audio and text data into actionable insights through speech recognition, emotion detection, and sentiment analysis. Passionate about building intelligent systems that automate complex workflows and deliver real-world impact.

PROJECTS

VoicePulse AI: Voice Analytics & Emotion Detection System

GitHub: https://github.com/Farid-Bytes/voicepulse-ai
Developed an AI-powered voice analytics system capable of analyzing conversations and extracting emotional and sentiment insights from audio recordings.

- Implemented speaker diarization using pyannote.audio to identify and separate speakers in conversation recordings
- Integrated Whisper API for high-accuracy speech-to-text transcription
- Built acoustic emotion detection pipeline using SpeechBrain models
- Applied VADER sentiment analysis to evaluate emotional tone from transcribed text
- Designed backend logic to aggregate speaker data, emotion detection, and sentiment insights into structured analytics reports
- Built scalable processing pipelines using Python and FastAPI
- Designed a multi-stage AI pipeline combining speech recognition, speaker diarization, and sentiment analysis to generate automated conversation insights

FlightMate: AI Based Flight Booking Assistant

GitHub: https://github.com/Farid-Bytes/flightmate_backend
Developed an AI-powered backend service for managing intelligent flight booking interactions.

- Built an AI-assisted booking system using FastAPI and agent-based decision logic
- Implemented REST APIs to manage flight search, booking operations, and user interactions
- Designed the backend architecture to support context aware decision making

E-Commerce Store: Laravel Web Application

GitHub: https://github.com/Farid-Bytes/laravel-ecommerce-store
Developed a simple e-commerce platform with a backend admin management panel.

- Built the backend using Laravel MVC architecture
- Implemented product management features including categories, brands, and inventory units
- Designed clean routing and controller logic for scalable backend operations

PROFFESIONAL EXPERIENCE

Laravel Developer Intern at Xelent Solutions

Worked on real-world Laravel-based applications with a focus on backend development, RESTful routing, and Blade templating. Contributed to building admin dashboards, product management systems, and form validation workflows using Laravel's MVC architecture.
