MOIZ UL HASSAN

📧 moizulhassan175@gmail.com
📍 Pakistan (Available for Remote Work)

PROFESSIONAL SUMMARY

AI-focused Computer Science graduate with hands-on experience in building intelligent systems, machine learning models, and automation tools. Passionate about developing AI-powered products, agent-based systems, and real-world solutions using data and machine learning.

Skilled in Python, Computer Vision, and AI automation, with a strong focus on building practical projects like AI agents, job automation systems, and real-time detection systems. Seeking opportunities to contribute to AI product development and grow into an advanced AI Engineer role.

CORE SKILLS

◆ AI / Machine Learning

- Machine Learning (Supervised & Unsupervised Learning)
- Computer Vision (Object Detection, Image Classification)
- Natural Language Processing (NLP Basics)
- Model Training, Evaluation & Optimization
- AI Agent Development (Basic Level)

◆ Programming & Tools

- Python (Pandas, NumPy, Scikit-learn)
- OpenCV
- Git & GitHub
- VS Code

◆ Data & Systems

- Data Cleaning & Preprocessing
- Basic SQL & Database Concepts
- Data Analysis

◆ AI & Automation Tools

- ChatGPT, Claude (Workflow Usage)
- Prompt Engineering
- Automation Scripts (Python-based)

PROJECTS

❖ AI Surveillance System (Computer Vision Project)

- Developed a real-time object detection system using Python and OpenCV
- Detects people, vehicles, and fire from video streams
- Implemented alert system (beep sound) for fire detection
- Designed structured dataset pipeline for training and testing

---

❖ Agentic AI Desktop Assistant (AI Agent Project)

- Built a desktop-based AI assistant using Python
- Capable of performing automated tasks (file handling, commands, basic queries)
- Integrated AI models for intelligent responses and task execution
- Designed as an autonomous agent performing multi-step actions

---

❖ AI Job Auto-Apply System (LinkedIn Automation)

- Developed automation tool that searches and applies to jobs automatically
- Uses structured logic to filter relevant job listings
- Designed workflow for job scraping, filtering, and application
- Focused on saving time and increasing job application efficiency

---

❖ Image Classification Model

- Built ML model for classifying satellite images (forest vs non-forest)
- Applied preprocessing, training, and validation techniques

❖ Data Analysis Project

- Performed data cleaning and analysis using Pandas
- Extracted insights and structured data for better decision-making

---

EDUCATION

Bachelor of Science in Computer Science (BSCS)
✓ Completed

TECHNICAL STRENGTHS

- Strong problem-solving mindset
- Ability to build AI-based systems from scratch (basic level)
- Fast learner with high adaptability
- Interest in real-world AI product development

SOFT SKILLS

- Self-motivated & disciplined
- Strong work ethic
- Quick learner
- Ability to work independently

LANGUAGES

- English (Intermediate)
- Urdu (Fluent)

CAREER OBJECTIVE

To become a professional AI Engineer by building intelligent systems, AI agents, and scalable machine learning products that solve real-world problems and generate business value.

AVAILABILITY

✓ Available for full-time remote work
✓ Open to internships and entry-level roles
✓ Ready to work in high-performance environments
