waseemaiss784@gmail.com

SUMMARY

Dedicated Software Engineer with over 1 years of professional experience in .NET development, web applications, and API integrations. Skilled in database design, stored procedure optimization, and full-stack development using ASP.NET MVC/Core, JavaScript, AngularJS, and Bootstrap. Experienced in leading teams, version control, and managing deployments. Strong collaborator with a passion for learning new technologies and delivering efficient and scalable software solutions.

SKILLS

- **Languages:** C#, SQL, JavaScript, HTML, CSS, JSON
- **Frameworks:** ASP.NET MVC, .NET Core 6, React, Entity Framework (Code First & DB First)
- **Databases:** Microsoft SQL Server
- **Version Control:** Git, GitHub
- **Tools & Technologies:** Bootstrap, jQuery, AJAX, API Integrations,
- **Other Expertise:** Stored Procedure Optimization, Service Integration, Role & Permission Management, Dynamic UI Generation

---

WORK EXPERIENCE

Jump Sollutions

Pvt ltd. PIA Road lhr.
Feb 2024 - April 2025

GitHub: https://github.com/Waseem-Aiss/OnlineBookShoping

Online Book Store Management System

Technologies: ASP.NET Core Razor Pages, C#, SQL Server, Entity Framework Core (Code First), Microsoft Identity, AJAX, jQuery, JavaScript, Bootstrap

- Implemented Microsoft Identity Framework for secure user authentication and authorization.
- Developed Role-Based Access Control (RBAC) with Customer, Manager, and Admin roles.
- Integrated security features including password hashing, email confirmation, and cookie-based authentication.
- Built a responsive UI using ASP.NET Core Razor Pages with mobile-first design using Bootstrap.
- Implemented AJAX and jQuery for asynchronous operations such as adding items to the cart and searching books without page reload.
- Added JavaScript-based client-side validations and dynamic DOM manipulation.
- Developed a centralized Admin Dashboard to manage system operations.
- Implemented Product Management (CRUD) for books including cover uploads, pricing, and genres.
- Created User Management module for role assignment and account status control.
- Implemented Category & Subcategory management for dynamic product organization.
- Built Order Tracking system for monitoring order lifecycle from Pending to Delivered.
- Engineered a persistent shopping cart system that retains user selections across sessions.
- Implemented price calculation logic including discounts, taxes, and shipping fees.
- Added stock validation to prevent purchasing out-of-stock items.
- Applied Repository Pattern and Unit of Work for maintainable and scalable architecture.
- Implemented Dependency Injection for loose coupling between services.
- Used Entity Framework Core (Code First) with SQL Server for efficient data persistence and relational mapping.
- Implemented Data Seeding to automatically create initial roles and admin credentials during deployment.

Dot Net Developer

(Part-time, Remote)

- Developed and enhanced web application features using **C#, SQL Server, and JavaScript**.
- Designed and maintained responsive web pages using **HTML, Bootstrap, jQuery, AJAX, and JSON**.
- Implemented **database-based validations** and handled JSON responses for frontend interactions.
- Contributed to the development and maintenance of **REST APIs**, ensuring stable communication with client systems.
- Assisted in **API integration and testing**, verifying request/response data before deployment.
- Maintained **technical documentation** for API integrations and client configurations.
- Managed **database configurations**, including storing and updating API keys and credentials.
- Developed **SQL queries and stored procedures** for validating bank details and other transactional data through API responses.
- Created and tested **JSON payloads for REST API calls** during development and debugging.
- Assisted in **deployment and maintenance** of web-based applications.
- Participated in **migration of multiple client websites and applications** to a new hosting

environment.
- Provided **technical support and troubleshooting** for client systems, including fixing database issues and resolving API integration problems.

SIDE PROJECT

- Developed a custom **.NET Core MVC-based Inventory Management System** for small-scale business management, including product, order, and reporting modules.

Advanced Academic Knowledge (MS Coursework)

Cloud Computing & Distributed Systems

• Studied cloud computing architecture and service models including IaaS, PaaS, and SaaS.
• Gained strong theoretical knowledge of servers, virtualization, and Virtual Machines (VMs) in cloud environments.
• Learned containerization technologies including Docker and container orchestration concepts with Kubernetes.
• Studied Virtual Private Cloud (VPC) concepts including network isolation, subnets, and secure cloud networking.
• Gained knowledge of cloud security mechanisms including encryption, identity management, and secure data protection.
• Studied Green Cloud Computing concepts focusing on energy-efficient and sustainable cloud infrastructures.
• Learned Big Data processing frameworks including Hadoop ecosystem and Apache Spark.
• Studied Cloud for Machine Learning (Cloud as ML) concepts for scalable ML workloads.
• Gained theoretical understanding of FinOps (Cloud Financial Operations) including cloud cost optimization, resource utilization, and financial governance in cloud environments.
• Developed understanding of distributed systems, scalability, load balancing, and fault tolerance in cloud platforms.
• Gained academic knowledge of major cloud platforms including Amazon Web Services, Microsoft Azure, and Google Cloud Platform, covering core services such as cloud compute (EC2, Azure Virtual Machines, Compute Engine), storage services (S3, Azure Blob Storage, Cloud Storage), and networking services for scalable cloud infrastructure

Advance Computer Architecture & Processor Design

- Studied modern processor architectures and instruction set design principles.
- Gained detailed understanding of CISC architecture, including x86 and its modern extensions, focusing on complex instruction handling and backward compatibility.
- Developed in-depth theoretical knowledge of RISC architecture, particularly ARM processor design, emphasizing simplified instruction sets and power-efficient computing.
- Studied CPU pipeline architecture, instruction execution models, and memory hierarchy concepts.
- Analyzed how hardware architecture decisions impact software performance, system efficiency,

and scalability.
