Hanzla Ali

AI/ML Engineer

Lahore, Pakistan | +92 348 7429177 | hanzlali089@gmail.com | linkedin.com/in/hanzlali/ | github.com/hanzlali089

Profile

"Motivated AI Engineer with experience in ML, DL, and NLP. Proficient in Python and model development, seeking to apply skills through a dynamic internship."

Education

"Bachelor of Science in Artificial Intelligence| 2023- CONT… " | UNIVERSITY OF MANAGEMENT AND TECHNOLOGY, LAHORE, PAKISTAN

INTERMEDIATE IN ICS | 2022 | GOVT. MAO COLLEGE, LAHORE, PAKISTAN

Skills & Abilities

- **Programming Languages:** Python, C++, SQL
- **Machine Learning**: Linear Regression, Logistic Regression, Decision Tree, Random Forest, SVM
- **Deep Learning**: TensorFlow, Keras, Neural Networks, CNNs, DNNs
- **Data Science:** Data Cleaning, Preprocessing, Feature Engineering
  Visualization: Matplotlib, Seaborn
- **Speech Recognition:** Whisper, Deep Speech, Kaldi
- **Tools/Platforms**: jupyter Notebook, Google Colab, Visual Studio, Docker, Amazon (Wholesale & Arbitrage)

Projects

- Gender Classification (Machine learning models, Dense Neural Network, Convolutional Neural Network)
- DDoS Attack Detection (Deep Learning)
- Branch Proof: Blockchain-powered Branch Comparison and Analytics
- NLP Project (The goal is to analyze each text and assign a corresponding sentiment label (e.g., positive, negative, or neutral). This task will encompass data cleaning, preprocessing, feature engineering, model selection, and evaluation

Experience

Amazon Wholesale & Arbitrage Specialist

- Warner & Spencer managed product listings.
- Conducted data-driven market analysis.

MATHEMATICS AND COMPUTER TEACHER

Home Tutor

- Provided one-on-one tutoring in Math and Computer Science, improving students' grades and understanding.
- Created personalized lesson plans to meet individual learning goals.
- Helped with exam prep, problem-solving, and project guidance to build critical thinking skills.

Hackathons & Competitions

CUST Hackathon – NLP Project

- Built a text classification system using tokenization, vectorization, and ML models.

UMT Hackathon – Crime Prediction

- Used clustering (K-Means, DBSCAN) and anomaly detection to identify crime hotspots.
