Home: LANDI ARBAB POST OFFICE KHAS MOHALLAH GHARI MALIK AHMAD PESHAWAR, 25220 PESHAWAR (Pakistan)

ABOUT ME

Motivated and detail-oriented Artificial Intelligence (AI) Engineer with a strong foundation in Data Analysis, Machine Learning (ML), and Deep Learning(DL). Certified in AI from NAVTTC. Skilled in Data Preprocessing and training ML and DL Models to ensure high-quality digital solutions. Experienced in collaborative teamwork and delivering projects with attention to detail. Passionate about continuous learning, mastering AI tools, and contributing to impactful software projects.

EDUCATION AND TRAINING

BS Software Engineering

City University of Science and Information Technology [12/10/2021 – 17/09/2025]

City: Peshawar | **Country:** Pakistan | **Level in EQF:** EQF level 6

WORK EXPERIENCE

Police Public School and College – Peshawar, Pakistan

artificial intelligence engineer

[11/09/2025 – Current]

- Assisted students in understanding the fundamentals of Artificial Intelligence and emerging technologies through practical demonstrations and guided lab sessions.
- Supported the implementation of basic AI concepts such as machine learning, data analysis, and automation tools in academic learning environments.
- Guided students in exploring modern technologies including AI, data-driven applications, and intelligent systems to enhance their technical skills.
- Encouraged students to develop problem-solving skills by introducing them to real-world applications of artificial intelligence and digital technologies.

National Center For Cyber Security UETP – Peshawar, Pakistan

artificial intelligence engineer

[01/07/2025 – 31/12/2025]

- Developed and implemented machine learning and deep learning models for research-orientated projects addressing cybersecurity and intelligent data analysis challenges.
- Collaborated with research teams to design, train, and evaluate AI models, improving model accuracy and performance through experimentation and optimisation.

- Contributed to the development and publication of a conference research paper, including literature review, experimental design, and technical documentation.
- Led and coordinated project tasks within the team, demonstrating strong leadership, collaboration, and problem-solving skills.
- Applied modern AI techniques and continuously explored emerging advancements in artificial intelligence and deep learning to enhance project outcomes.

SKILLS

Python / Data Analysis, Data Discovery, Data Profiling / Data VisualizationTableau(Data Analysis)Data Management / Data Preprocessing and exploratory data analysis (EDA) / Databases (MongoDB MySql PostgresSql) / Machine Learning • / Deep Learnig / Computer VIsion / natural language processing

LANGUAGE SKILLS

Mother tongue(s): Urdu

Other language(s):

English

LISTENING C1 **READING** C1 **WRITING** C1

SPOKEN PRODUCTION C1

SPOKEN INTERACTION C1

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

PUBLICATIONS

[2025]

Early Identification of Depression from Twitter Data Using Natural Language Processing, Sentiment Analysis, and Machine Learning Techniques Conducted a comparative study on detecting mental health-related distress in Twitter posts using machine learning and deep learning models. Developed an end-to-end NLP pipeline involving text normalisation, tokenisation, feature extraction via TF-IDF, and dense word embeddings. Trained and evaluated SVM, GBM, LSTM, and GRU classification models on a labelled dataset. The research demonstrated that a robustly engineered SVM achieved the highest classification accuracy of 82.8%, successfully proving that classical algorithms can competitively outperform deep neural architectures in short-text psychological analysis and social media monitoring.

Authors: Malik Ahsan Kamran, Faran Saeed, Ehaab Ullah et al. | **Journal Name**: 20th International Conference on Emerging Technologies (ICET-25)

[2026]

Toward Efficient Fake Frames Detection in Video Using Deep Learning Developed a deep learning-based deepfake detection system utilising the ResNet50 convolutional neural network architecture to combat visual misinformation. Trained on the Celebrity Deepfake dataset, the model processes videos by extracting and analysing individual frames to identify artificially manipulated facial features. The system achieved robust performance metrics, including 82.33% accuracy, 89.15% recall, and an 82.46% F1 score. To ensure practical real-world usability, engineered a user-friendly web application that allows users to seamlessly upload videos for rapid and accessible digital content verification.

CERTIFICATIONS

[Cisco Networking Academy, 17/01/2026]

Introduction to AI Completed the Introduction to AI course from Cisco Networking Academy, establishing a solid foundation in machine learning, natural language processing, computer vision, and AI ethics. Gained practical insights into data-driven decision-making, algorithms, and automation, strengthening my analytical skills to understand how AI technologies drive digital innovation and solve complex industry problems.

Mode of learning: Online

[National Center For Cyber Security UETP, 21/01/2026]

National Vocational and Technical Training Commission (NAVTTC) Completed a specialized training program in Artificial Intelligence (Machine Learning, Deep Learning, and Communication) offered by the National Vocational and Technical Training Commission (NAVTTC). The program provided practical and theoretical knowledge of AI technologies, including machine learning algorithms, deep learning models, and intelligent communication systems. During the training, I worked on multiple hands-on projects involving data analysis and predictive modeling, and explored research-oriented concepts such as data preprocessing, model evaluation, and the application of AI techniques to solve real-world problems. The program enhanced my analytical, programming, and research capabilities in the field of artificial intelligence.

Mode of learning: Work based
