WORK EXPERIENCE

PureLogics, Lahore, Pakistan
Software Engineer Intern — 10/2025 - Present

- Gained experience with data preprocessing, EDA, model building, optimization, and deployment using Scikitlearn, Matplotlib, and Seaborn
- Learned LLM fine-tuning techniques, including supervised fine-tuning (**SFT**) and parameter-efficient fine-tuning (**PEFT**) methods such as **LoRA** and **QLoRA**.
- Explored **Generative AI** and **RAG** pipelines for building intelligent and interactive systems

Brainium, Lahore, Pakistan
Software Engineer Intern — 09/2025

- Implemented ML algorithms such as Regression, SVM, Decision Tree, Random Forest, KNN, Naive Bayes, and K-Means
- Applied model evaluation using K-Fold Cross Validation and performance metrics.

EDUCATION

University of Central Punjab, Lahore, Pakistan
B.S. in Computer Science — 05/2025, GPA: 3.79
Coursework: Deep Learning – covered neural networks (forward/backward propagation, loss and cost functions, gradient descent), **CNNs**, **RNNs**, **LSTMs** (theory with implementation), and **Transformers** (architecture and applications)

SKILLS

C/C++, Python, sklearn, TensorFlow/PyTorch, MySQL, PostgreSQL, HTML5, CSS, JavaScript, Bootstrap, Git/Github, LangChain, LangGraph, FastAPI.

PROJECTS

Agentic Medical Assistance — Advanced multisource knowledge retrieval system.

- Developed a stateful Agentic RAG system using **LangGraph** and **LangChain** to orchestrate dynamic reasoning between **Long-Term Memory (Mem0)**, **Qdrant** for high-dimensional vector search, and **Tavily Search** for the latest web search, utilizing **PostgreSQL** conversation state management.
- Engineered a production-ready **FastAPI** backend featuring a '/chat' endpoint for processing real-time agentic queries and a '/history' endpoint for retrieving conversation states and session checkpoints managed via **PostgreSQL**.

Search Agent Using LangChian — Search videos, news, and articles with authors using AI.

- AI-powered search agent leveraging **ReAct** (Reason and Act)-style orchestration with **Qwen-3-32B** and **Llama-3.3-70B** models to interpret user queries and synthesize multi-source answers.
- Implemented standardized tools for **web**, **news**, **Wikipedia**, and **Google Scholar** with a custom **YouTube** tool that can extract text from YouTube videos provided with a link to the videos.
- Utilized **LangChain Hub prompt templates** to enforce a structured **Thought** → **Action** → **Observation** → **Answer** reasoning loop, improving reliability and answer quality.
