SYED WASI UL HASSAN

Full Stack Developer | MERN Stack | React.js | Node.js

Rawalpindi, Pakistan | +92 304-5583296 | syedwasiulhassan161@gmail.com

LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer (MERN Stack) with a BSCS degree (CGPA 3.42/4.00) from NUML Islamabad and hands-on experience in building scalable, production-grade web applications. Developed and deployed 3 full-stack applications including an AI-integrated e-commerce platform and a blockchain-based auction engine. Experienced in RESTful API architecture, JWT/Cookie authentication, MongoDB optimization, and web security. Seeking a Full Stack or React/Node.js Developer role to contribute to high-impact engineering teams.

TECHNICAL SKILLS

Frontend	React.js (v19), Redux Toolkit, Tailwind CSS, Vite, HTML5, CSS3
Backend	Node.js, Express.js, REST API Design, JWT Authentication, Cookie Auth
Databases	MongoDB Atlas (Mongoose), Firebase Firestore, Atomic Operations
Cloud & DevOps	Git/GitHub, Vercel, Firebase Hosting, Cloudinary, Docker, CI/CD, Postman
Security	Web Penetration Testing, Wireshark, Nmap, XSS/CSRF Prevention, HttpOnly Cookies
Emerging Tech	Solidity, Web3.js, React Native, Groq AI (Llama 3.1), RAG Architecture

EXPERIENCE

Web Penetration Testing Intern | Source Code Academy

Rawalpindi, Pakistan | Jan 2026 – Mar 2026

- Performed vulnerability assessments on 5+ live MERN stack web applications, identifying and reporting critical security flaws.
- Implemented security improvements including input validation, rate limiting, and HTTP security headers, reducing attack surface by ~30%.
- Used Wireshark and Nmap to analyze network traffic and identify open ports/services on test environments.
- Documented findings in professional penetration testing reports following OWASP Top 10 guidelines.

CORE PROJECTS

Raahwaar-PK — Full-Stack E-Commerce Platform — *React.js, Node.js, MongoDB, Groq AI, RAG*

Live Demo | GitHub | *Nov 2025 – Jan 2026*

- Built a complete e-commerce platform with product listing, cart, checkout, and order management supporting 50+ product SKUs.
- Engineered an AI Shopping Assistant using RAG (Retrieval-Augmented Generation) with Groq AI (Llama 3.1), providing real-time inventory-aware product recommendations.
- Implemented Atomic Inventory Updates via MongoDB BulkWrite to eliminate race conditions during concurrent checkout events.
- Secured sessions using HttpOnly Cookies and SameSite policies, preventing XSS and CSRF attacks across all endpoints.

BlockBid — Blockchain Auction Engine — *Solidity, Web3.js, React Native, Ethereum*

Live Demo | GitHub | *Aug 2024 – June 2025*

- Designed and deployed Solidity Smart Contracts automating the full auction lifecycle — bidding, winner selection, and fund release.
- Implemented an On-Chain Escrow system locking bidder funds trustlessly, eliminating the need for a central intermediary.
- Integrated Web3.js with React Native to enable mobile-based blockchain interaction and transaction signing.
- Built real-time event listeners to instantly notify users of outbid status and auction closure events.

FlashChat — Real-Time Messaging Application — *React.js, Firebase Firestore, Cloudinary, Vite*
Live Demo | GitHub | *May 2024 – Jul 2024*

- Developed a responsive real-time chat app using Firebase Firestore, achieving sub-second message delivery for active users.
- Integrated Cloudinary for automated image transformations and CDN delivery, reducing media load times by ~40%.
- Achieved 90+ Lighthouse performance scores by implementing Lazy Loading and manual chunk splitting via Vite.

EDUCATION

BS Computer Science (BSCS) | National University of Modern Languages (NUML)
Islamabad, Pakistan | 2021 – 2025

- CGPA: 3.42 / 4.00
- Specialization: Full-Stack Development & Blockchain Technology
- Final Year Project: BlockBid — Blockchain-Based Auction Engine (Distinction)

CERTIFICATIONS & TRAINING

- Web Penetration Testing — Source Code Academy (2026)
- MERN Stack Development — Self-directed via deployed production projects (2023–2026)
